4. short Demo

# What is it?

Forth is postfix

infix operation in the gforth interpreter

simple expression

5 4 + => 5 + 4

3 ^ 5  (no forth pendant for integer)

# How does it work?

operation definition in own word list (temporary extension)

define tokens to execute infix operations ( ` 5 + 4 ´ )

two "stacks" to store operands and data

    in memory

    self defined operations

    temporary

a "fix" for to number ( or bug with .s" -" )

    will be explained in example

# Demo

Now comes a short source demo.

Thank you for your attention.
